### RESEARCH EXPERIENCE

#### Massachusetts Institute of Technology

Cambridge, MA

*Research Assistant, Department of Nuclear Science and Engineering*

*Aug 2023 – Present*

*Incoming Intern, Summer Research Program - General*

*June 2024 - Aug 2024*

- **Research Advisor:** Prof. Haruko Murakami Wainwright.
- **Project:** Modeled groundwater flow and contaminant transport dynamics to support long-term monitoring strategies in the local watersheds near the Savannah River Site, a Department of Energy-owned nuclear materials Superfund facility. Analyzed the impact of factors such as aquifer and well depth on contaminant mobility.
- **Methods:** Extended the PyLEnM package for contamination analysis with a framework consisting of: (1) linear regression to predict the time-to-MCL (maximum concentration limit), (2) random forest regression to identify key factors affecting time-to-MCL, and (3) a Bidirectional LSTM model to predict near-future concentrations over the next several years, thereby enhancing prediction accuracy and optimizing field sampling intervals.

**Vietnam's Ministry of Natural Resources and Environment**

***Research Assistant and Compliance Reporter, Remote Sensing Department***

Hanoi, Vietnam

*April 2020 - Present*

- **Research Advisor:** Dr. Le Quoc Hung.
- **Project:** Monitoring human-induced land deformation processes and assessing the impact of hydroelectric power plants in Vietnam territories.
- **Methods:** Established image networks using Synthetic Aperture Radar (SAR) data to monitor ground movements. Performed interferometric processing to analyze phase shifts, revealing land deformation patterns. Formulated models for primary and secondary displacement. Employed kriging, a geostatistical technique, to validate displacement maps. Utilized finite element methods (FEM) to simulate deformation processes caused by groundwater extraction, hydraulic fracturing, and mining activities.

**Massachusetts Institute of Technology**

***Summer Fellow, Station1 Frontiers Fellowship***

Remote

*June 2023 - Aug 2023*

- **Research Advisor:** Prof. Christine Ortiz.
- **Project:** Applying LCA methodology to quantify the environmental benefits of biodegradable materials compared to traditional polymers, with a specific focus on polylactic acid (PLA) as an alternative to PVC.
- **Methods:** Employed the ReciPe model for LCA, which utilizes impact assessment methods and normalization factors to translate various environmental impacts into a set of sub-scores.

**University of Tokyo**

***Summer Intern, Graduate School of Frontier Sciences***

Kashiwa, Chiba, Japan

*April 2022 - Aug 2022*

- **Research Advisor:** Prof. Frith Martin.
- **Project:** Developing a sorting algorithm to identify orthologous regions in genomic datasets, aiming to uncover different disease mechanisms e.g. asthma. Orthologous regions are genes with similar sequences and functions across different species.
- **Methods:** Designed the algorithm utilizing dynamic programming and hidden Markov models (HMM) to enhance accuracy and efficiency of ortholog identification. Implemented maximum likelihood estimation (MLE) for parameter tuning in HMM, optimizing its performance.

**Beloit College**

***Research Assistant, Department of Biology***

Beloit, WI

*Aug 2021 - May 2023*

- **Research Advisor:** Prof. Rachel Bergstrom.
- **Project:** Optimizing machine learning algorithms for seizure detection using scalp Electroencephalography (EEG) datasets in collaboration with the University of Wisconsin-Madison.
- **Methods:** Designed enhanced seizure prediction models using logistic regression and recurrent neural networks (RNNs), with a specific focus on long short-term memory (LSTM) networks. Implemented cross-validation techniques to ensure model robustness and generalizability across datasets of patients with diverse demographics and being diagnosed with Myoclonic and Absence seizures.
