PROESSIONAL EXPERIENCE

RESEARCH EXPERIENCE

Massachusetts Institute of Technology   Cambridge, MA
Research Assistant, Department of Nuclear Science and Engineering   *Aug 2023 – Present*
Incoming Intern, Summer Research Program - General   *June 2024 - Aug 2024*
- **PI**: Prof. Haruko Murakami Wainwright.
- **Project:** Modeled groundwater flow and contaminant transport dynamics in local watersheds near the Savannah River Site, a Department of Energy-owned nuclear materials Superfund site. Analyzed the impact of factors such as aquifer characteristics and well depth on contaminant migration.
- **Methods:** Employed the PyLEnM package for numerical simulations, utilizing partial differential equations (PDEs) like the advection-dispersion equation to model groundwater flow patterns. Incorporated factors such as hydraulic conductivity, porosity, dilution, and absorption. Used Principal Component Analysis (PCA) to identify key trends in environmental data for improved monitoring.
- **Techniques:** Implemented random forest regression to identify key factors affecting contaminant concentration variations. Currently exploring a combined convolutional neural network (CNN) and long short-term memory (LSTM) model with attention mechanisms for time-series forecasting of contaminant levels, aiming to improve prediction accuracy and reduce frequency of field sampling.

Vietnam's Ministry of Natural Resources and Environment   Hanoi, Vietnam
Research Assistant and Compliance Reporter, Remote Sensing Department   *April 2020 - Present*
- **PI**: Dr. Le Quoc Hung.
- **Project:** Monitoring land deformation processes in Vietnam territories.
- **Techniques:** Established image networks using Synthetic Aperture Radar (SAR) data to monitor ground movements. Performed interferometric processing to analyze phase shifts, revealing land deformation patterns. Formulated models for primary and secondary displacement. Employed kriging, a geostatistical technique, to validate displacement maps. Utilized finite element methods (FEM) to simulate deformation processes caused by groundwater extraction, hydraulic fracturing, and mining activities.

University of Tokyo   Kashiwa, Chiba, Japan
Summer Intern, Graduate School of Frontier Sciences   *April 2022 - Aug 2022*
- **PI**: Prof. Frith Martin.
- **Project:** Development of a sorting algorithm for orthologous region identification in genomic datasets.
- **Focus:** The algorithm focused on identifying orthologous regions in human genomes. Orthologous regions are genes with similar sequences and functions across different species.
- **Methods:** Developed a sorting algorithm utilizing dynamic programming and hidden Markov models (HMM) to enhance accuracy and efficiency of ortholog identification. Implemented maximum likelihood estimation (MLE) for parameter tuning in HMM, optimizing its performance.

Beloit College   Beloit, WI
Research Assistant, Department of Biology   *Aug 2021 - May 2023*
- **PI**: Rachel Bergstrom.
- **Project:** Optimizing machine learning algorithms for seizure detection using EEG datasets.
- **Focus:** Improved the accuracy of seizure detection in scalp EEG datasets through a research partnership with the University of Wisconsin-Madison.
- **Techniques:** Developed improved seizure prediction models using logistic regression and recurrent neural networks (RNNs), specifically focusing on long short-term memory (LSTM) networks. Implemented cross-validation techniques to ensure model robustness and generalizability across different datasets.
